I make films with generative AI and build the software around them. At NexGen Architects I produce **Hapie.ai's launch films, trailers and investor videos end to end**: script, shot generation, AI voice, edit, sound and motion. Behind that sit **3+ years of editing** for YouTube creators and B2B brands, with work passing **2.6M views**. As a CSE undergrad I ship full-stack AI products: MCP tooling, mobile apps and two **Smart India Hackathon 2026** entries for ISRO problem statements.

EXPERIENCE

AI Video Editor & Filmmaker · NexGen Architects (Hapie.ai)

2026 – Present

- Produced the **Hapie.ai launch campaign**: a 95 s narrated launch film, 52 s and 30 s beat-synced trailers, and a 27 s "Who's governing it?" spot built as one continuous match-cut world.
- Made **three 3-minute investor films** on one AI voiceover and designed the seed investor deck, with 3D-animated characters generated in Nano Banana Pro.
- Built a **reference-locked AI film pipeline** (character sheets → scene plates → Seedance prompts) that holds faces and style across shots. Motion design is authored with AI coding agents in HyperFrames (HTML → video) and handed off as **layered Premiere / After Effects projects**.
- Built **SubtitlePlugin**, a Premiere Pro panel that transcribes locally with Whisper and writes native captions; used in client delivery.

Freelance Video Editor · YouTube creators & brands

2024 – Present

- **DexterTime** (56K subs): a 24-minute long-form edit passed **500K views**, far beyond the channel's usual reach.
- **Deep Pockets** (430K subs): effects-heavy Shorts and Reels; the best performer passed **2.6M views**.
- **Avinash Mada** (530K on Instagram): 6+ month retainer on the "Financial Freedom with AI" daily shorts and long-form business essays, such as a SUGAR Cosmetics breakdown built on AI b-roll.
- **FoodHub / Restaurant Codex** (B2B SaaS): a 9-minute founder-led product demo and 7 social ads mixing real footage with AI b-roll. **Axis Bank**: ad reframes for 4:5, 9:16 and 1:1.

SELECTED PROJECTS

AutoMCP

automcp.vercel.app

Turns any GitHub repo or website into a working MCP server in ~60 s: Gemini reads the code, Llama 3.3 designs the tools, and it deploys to Cloudflare Workers. Built in under 36 hours at a hackathon.

Next.js 15 · FastAPI · Supabase · MCP SDK

BeamLock AI

SIH 2026 · ISRO PS 26169

A camera that finds and follows a laser beacon to align free-space optical terminals. Kalman-tracking simulator; a 240-run benchmark meets every ISRO target in clear and moderate conditions.

Python · OpenCV · NumPy

Groundtruth

MCP server

AI agents ask questions and real humans answer them, no sign-up needed. Published to the official MCP registry, Glama and Smithery.

TypeScript · Vercel · Supabase

SatQuery AI

satq.pages.dev

SIH 2026, ISRO PS 26167. Ask a satellite image a plain-English question; every answer comes with proof drawn on the image, a confidence score and the tool used.

Next.js · Cloudflare Pages · agentic routing over 4 models

Bunk-o-Meter

Android + web

Attendance and teacher-rating app for my CSE class: imports the college's attendance PDFs and reads the timetable with Gemini. Launched with a 60 s comic film.

Expo / React Native · Supabase edge functions · Cloudflare

Exam Quest

examsmasher.vercel.app

Exam-prep game for engineering subjects: 50+ chapters, 100+ interactive explainers and an AI tutor on every page that files GitHub issues from production.

React 19 · GSAP · KaTeX · Gemini

SKILLS

Generative AI	Higgsfield, Seedance, Kling, Veo, Google Flow, Nano Banana Pro, GPT Image, ElevenLabs, Suno, Topaz
Post & motion	Premiere Pro, After Effects, HyperFrames, Frame.io, FFmpeg
Craft	Story structure & retention, hooks, pacing, sound design, colour grading
Code	TypeScript, React / Next.js, React Native (Expo), Python, FastAPI, Node.js
AI & infra	Gemini API, MCP, Claude Code, Supabase / Postgres, Cloudflare, Vercel, Git

EDUCATION

B.Tech, Computer Science & Engineering

2024 – 2028

St. Thomas' College of Engineering & Technology (MAKAUT), Kolkata · currently 3rd year

HACKATHONS & RECOGNITION

- **3rd place**: CampusCore, an academic platform with a syllabus-aware AI tutor
- **Smart India Hackathon 2026**: two ISRO entries, SatQuery AI and BeamLock AI
- **Build What Moves India**: Wapsi, an income-tax e-filing redesign
- **AMD Developer Hackathon ACT II** (team SecondSelf) · Higgsfield GenPets contest
